# The Brief History of Bamboo Craft

# What is Bamboo craft?

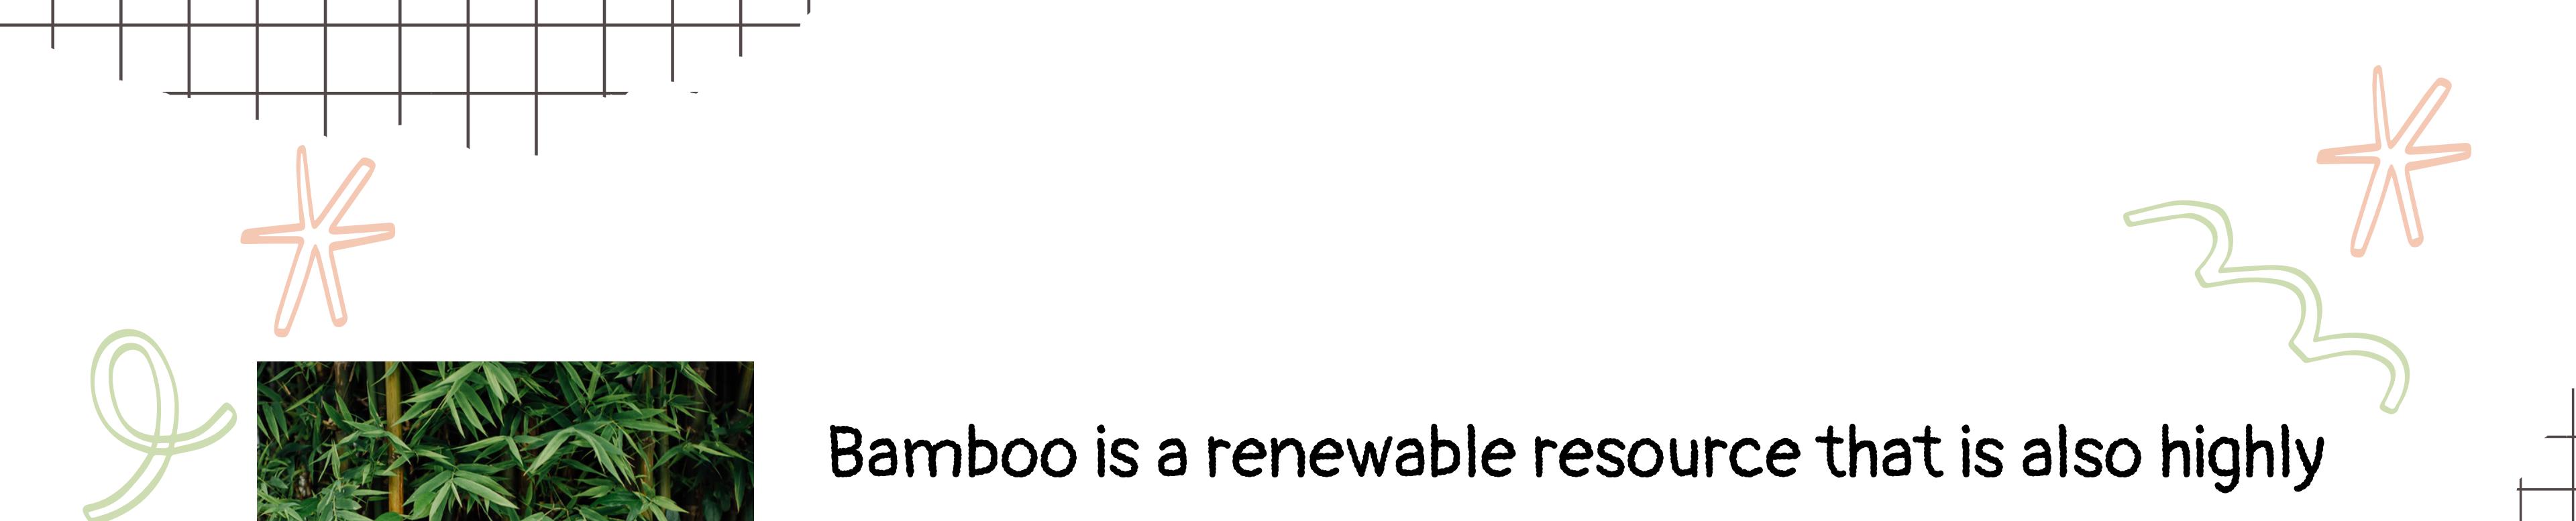

# BAMBOO

Bamboo is a beautiful building material that's appearing in more buildings and homes. Cultures have used bamboo for countless purposes for centuries. Some of those innovative bamboo applications inspired how we use the material today. You may naturally associate the plant with its native areas throughout Southeast Asia, but it does have other homes throughout the world. While the history of bamboo often focuses on its uses in China, the plant grows in countries across the globe, such as:

- The United States
- Japan
- Parts of Australia
- India

Bamboo is a renewable resource that is also highly versatile.

While it grows in temperate, tropical, and subtropical locations around the world, there's more bamboo in China than any other country worldwide: It ranks first in the amount of land used for bamboo growth

# What is Bamboo Craft?

Bamboo crafts are craft items made from bamboo. A range of items can be handcrafted from bamboo, often needing few or basic tools.

Bambooworking is the activity or skill of making items from bamboo, and includes architecture, carpentry, furniture and cabinetry, carving, joinery, and weaving.

# CHINA

Researchers have found archaeological evidence that (bamboo) was used in China as far back as 7,000 years ago. This evidence was unearthed in what is now the province of Zhejiang.

- Shang Dynasty between 16th and 11th centuries B.C: made bows and arrows of bamboo as well as household items
- Bamboo was also made into strips for writing on before the invention of paper
- Han Dynasty, between 206 B.C. and 220 A.D., bamboo was used in the actual creation of paper, due in part to its low cost.

# JAPAN

The earliest evidence of bamboo craft in Japan is Jōmon pottery excavated with woven-bamboo outer basketry dated to 6000 BCE.

- Nara (710–794) and Heian (794–1185) periods, when baskets were produced to hold flowers for scattering during Buddhist ceremonies.
- Finely woven baskets produced during the Kamakura period (1186–1333) known as Karamono imported from China or produced locally in the Chinese style, became greatly appreciated by the aristocracy as vessels for interior decoration and formal tea ceremony flower arrangements.

# PHILIPPINES

Bamboo is the material of the century according to the United Nations Development Program (UNDP). Our Filipino heritage in bamboo crafts dates back as far as the 15th century.

Basketry is probably the oldest bamboo handicraft in the Philippines. Bamboo baskets are produced for all sorts of uses.

Material, Processes, and  
Products/ Examples of  
Bamboo Crafts

# Material and Tools

Bamboo:  
The essential raw material for the craft.

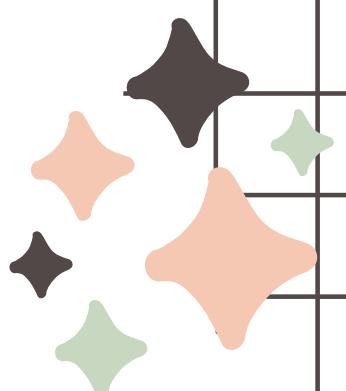

Knives:  
It is used in splitting, cutting, and slicing the bamboo.

Wood Block:  
It is used like the Hammer and Anvil or Bench block for work process.

Water:  
It is used in soften the bamboo surface for weaving.

Material, Processes, and  
Products/ Examples of  
Bamboo Crafts

# BAMBOO INSTRUMENTAL LAKUB

One significant bamboo craft is the making of lakub which is associated with the Maranao ethno-linguistic group of the large southern island of Mindanao. Lakub are multi-hued containers made from bamboo poles often used for carrying and storing tobacco.

# LAKUB making

To make lakub, the bamboo poles are cut at the beginning of the lunar cycle. This ensures that the sugar content of the sap is at its lowest reducing insect infestation. The poles are skinned and sun-dried for weeks. They are decorated with pieces of paper cut in decorative shapes then wrapped with cloth dipped in different dyes. These are then rolled in banana leaves, tied, and boiled in water. When the wraps are removed the resulting colorful tubes are polished with a piece of glass.

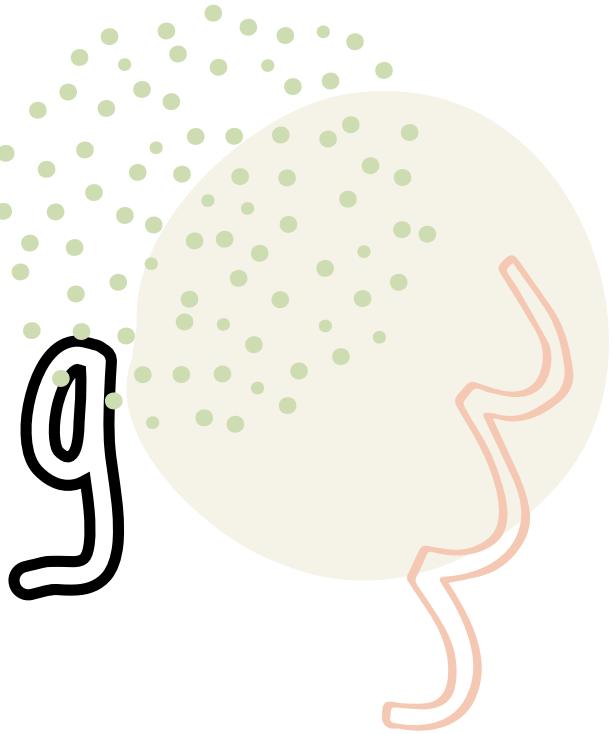

# BAMBOO FURNITURE- BAMBOO CHAIR

Bamboo has an extremely sustainable growth, and it is often this that is alluded to when bamboo's long shelf life is mentioned. Felled and untreated bamboo poles are not particularly durable, but if the bamboo furniture is properly pre-treated, it can have a lifespan of up to 50 years.

(video)

# BAMBOO HOUSEHOLD ITEM- BAMBOO

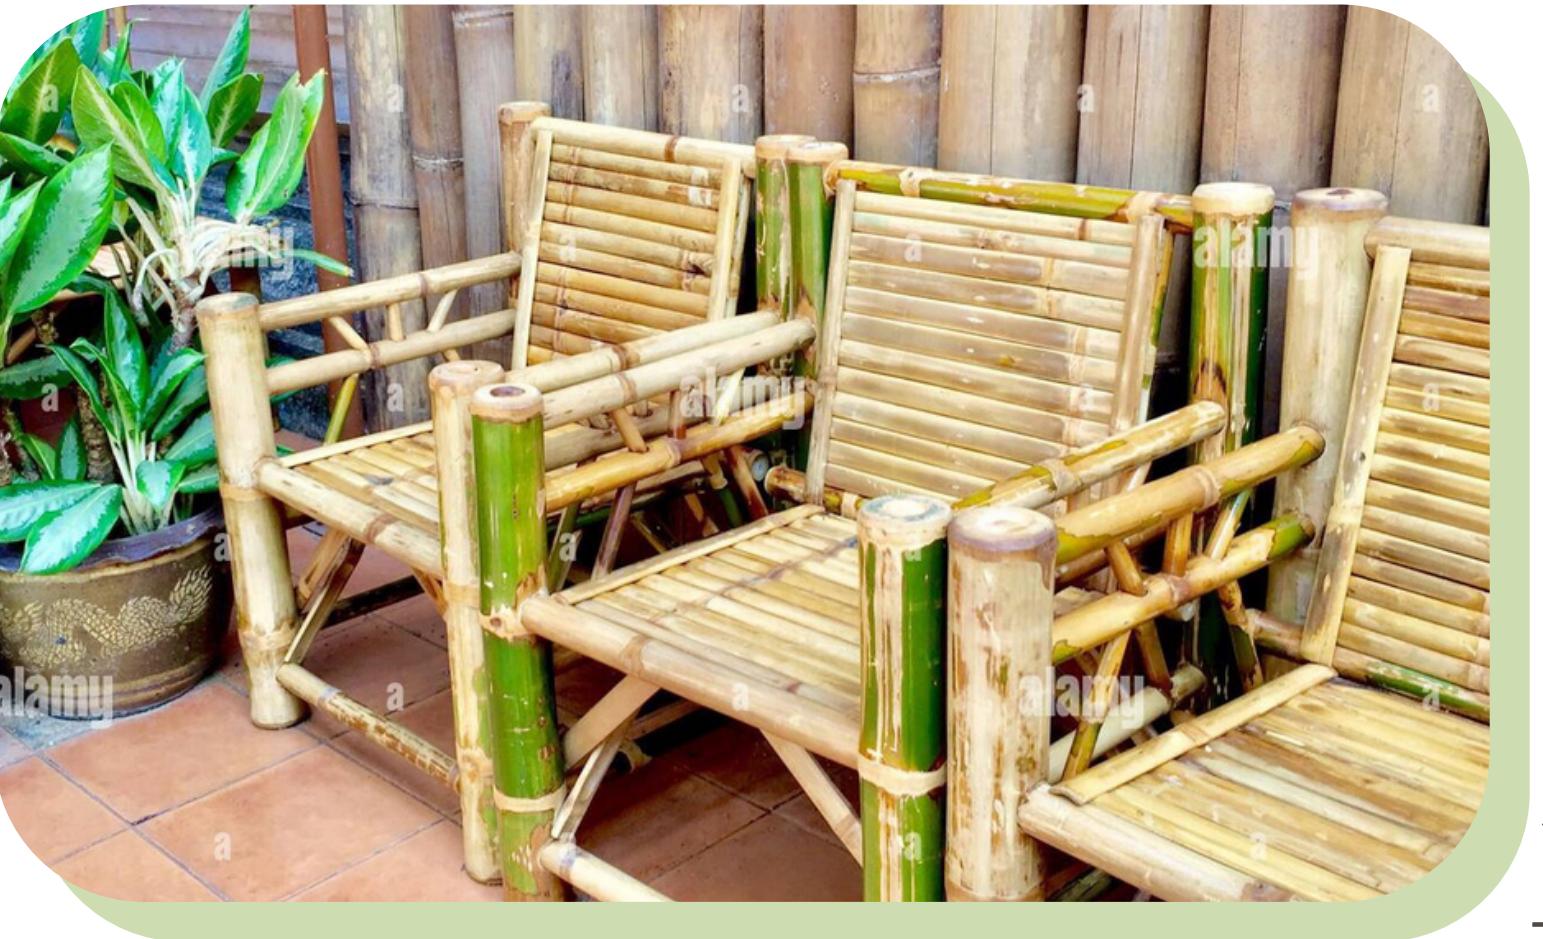

## CUTLERY

Bamboo cutlery is made using natural bamboo that is sustainably farmed and has little to no environmental impact. It provides jobs to people in regions of the world that desperately need them and it's strong, durable and lightweight.
