Case Study #2 (Web App integrating the ML Model)

Name: _____

1. Create a web application integrating the ML model created. The web application must include the following:

   a. Database for the datasets repository(classification and regression).
   b. Data visualization/EDA for classification and regression datasets.
   c. Prediction using classification model.
   d. Prediction using regression model.

2. Source code link.

3. Video/Demo link.

There will be an additional points for additional features and enhanced content of your website.
