Create a journal type of paper that discusses the concept and output of your ML Web Application. Include the following sections of your paper.

Abstract - The abstract briefly summarizes the development of a web application that seamlessly integrates machine learning models. It outlines the methodology used and highlights the key findings and implications for both the machine learning and web development. It must be concise (up to 200 words) summary of the whole paper.

1. Introduction - The introduction section provides an overview of the growing importance of machine learning in various applications and the increasing trend of incorporating these models into web-based platforms. It discusses the need for an efficient integration framework to bridge the gap between machine learning research and practical web application development. Additionally, it outlines the specific objectives and contributions of the paper in addressing this need.

2. Methodology - This section details the step-by-step approach used to develop the machine learning models and integration of that model to the web application.

3. Results and discussion - this section presents the outcomes of the developed web application and its integrated machine learning models.

4. Conclusion and Recommendation - The conclusion section provides a summary of the key findings, highlights the significance of the research, and offers insights into future research directions. The recommendation section, on the other hand, suggests actions that can be taken based on the research findings.

5. References
